Class Programs
{ string category (like b.tech, others, masters)
  string id (need to assign properly and keep a track of them.
  → will need in fetching specific data and favourites
  string name
  int year }

Start

Pageview (Selecting a program)

B.tech — Other Ug — Bachelor degrees — health care — Masters of Technology — others masters — Phd

Selecting Subcategories

Various programs enlisted

Let's say that user selected an option and suboption

use program.year to generate years pageview

Page view
1st | 2nd | 3rd | 4th
→ By using Sample program.

User selected any.

→ Fetch json accordingly

→ Show page view

Class ProgramYear
{ string id (same as Program)
  string class notes
  string year
  Midsem   mid Sem.
           → midsem pyre
           → checked papers
           → proper solution
  EndSem   endsem
           → endsem pyre
           → checked papers
           → proper solution }
